The Talking Solution to written problems

VOISec

VOISec

VoiSec is a small button for recording, storing and playing short spoken messages with unique design and qualities. The button can easily be attached to other objects, e.g. to tell the contents of a package. VoiSec runs on batteries, requires no other devices and can be re-used time after time.

Product facts at a glance

- Diameter 39 mm, total height 18.5 mm, when mounted in tray.
- 64 seconds of speech with a good quality of sound.
- Typically 200 play-outs of a 30 seconds message per batteries set (volume dependant).
- Powered by 2 replaceable 1.5 volts button cell batteries, type LR44/AG3.
- Delivered with 1 attachment tray and 1 thin adhesive magnet.

Design for all - many opportunities

At times, every person will be in an environment or situation where reading or writing is difficult. All individuals may appreciate VoiSec, one way or another, sooner or later.

A lot of people prefer spoken information to written. For some individuals, VoiSec may be of particular value due to personal conditions.

- **Visual impairment**
difficulties in perceiving text
- **Dyslexia**
difficulties in coding or de-coding text
- **Cognitive impairment**
difficulties in understanding text
- **Neurological/motorical impairment**
difficulties in writing
- **Aphasia**
difficulties in processing/expressing
- **Dementia**
difficulties in remembering or understanding
- **Lack of language skills**
dependency on an interpreter

VoiSec is designed for maximum ease of use and versatile application.

The functionality, size and ergonomic qualities of the button enable a versatility of applications. It can be carried in a pocket, attached to garment or other objects. It can be combined with relief or Braille markers, images, schedules, calendars...

Basically, it's only the user's imagination that sets the limits.

Safer medical information for all

The ability to distinguish and identify medication and to get information about the content and the prescribed usage can reduce the risk of harmful errors. For many

patients, personalised spoken information is a valuable complement to the commonly provided texts. VoiSec can keep it available at one touch, on the package.

Independent everyday living

VoiSec is easily attached to different surfaces and objects. A variety of attachment means, including double-sided adhesives, magnets and velcro, allow for a variety

of applications at home. The marking of food packages, drawers or potentially harmful objects are but a few examples.

"Take-away" communication

VoiSec can be handy as a personal memory and communication tool. Carried in a pocket, pinned to a jacket, hung in a neck-loop, strapped to a wrist... Prepared

phrases, buying lists, memos, etc. can easily be taken along when going out.

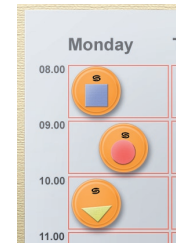

Caring for care-takers

VoiSec can communicate emotions as well as facts. The voices of those near and dear can be readily available e.g for children and elderly in hospital care. Care giver's instructions or patient feed-back can be recorded

to improve the quality of communication.

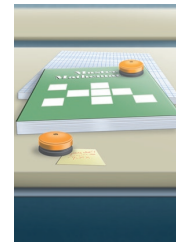

Special education and training

The size and attachability makes VoiSec an excellent multi-purpose tool for cognitive training, memory support and multi-modal information. Permanent

or removable means may attach a VoiSec to books, images and calendars. Use the surface for personalised marking by stickers or pens.

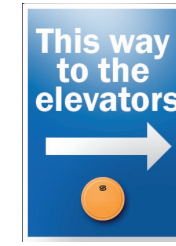

Workplace adaption and info sharing

The qualities of VoiSec allow for quick and easy spoken notes and memos, speech labelling of magazine files, marking of rooms and objects, etc. Casual

usage is easy since VoiSec runs on batteries and messages can be re-recorded time after time.

"Talking signs" for clear information

Not all visible signage is clearly understood by all. Particularly in environmental or personal circumstances where visibility is of limited value. The quickest way

from a given spot, the type of room behind a door, the floor number... VoiSec can add spoken information by a simple press, placed within reach for most individuals.

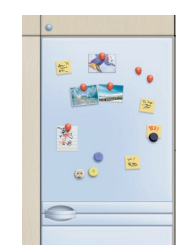

Pressing the lid is easier than writing

VoiSec will play the message when pressed. The construction is very robust and the entire lid activates the play-out. A forehead, an elbow or a foot may trigger the message, making VoiSec usable also for many

motorically impaired, e.g. mounted on an arm rest.

Social groups and family billboards

The ease-of-use and marking possibilities make VoiSec ideal for casual and personal voice messaging. Adhesive magnets are available, making VoiSec perfect for the

common family billboard: the fridge door.
